

VERTICALLY ADJUSTABLE BULK LOADING PLATFORM

This vertically moving fall protection platform is ideal for powder bulk loading places, especially when there is multiple or movable loading bellows on the loading line.

It is easy and safe to travel on the platform regardless of the type and location of the vehicle. The liftable grating elements are hinged and lightened by gas springs, making them easy and effortless to raise.

The protection platform frame is custom tailored for individual vehicle equipment, purpose of use, and environment. The fall protection platform moves electrically, controlled by buttons on the control unit.

The safety structure is manufactured from sturdy structural steel and is designed according to "Safety of machinery. Permanent means of access to machinery" EN ISO 14122-3:2016 standard.
