

HORIZONTALLY MOVABLE SAFETY STRUCTURE

This horizontally linearly movable fall protection device is a perfect solution for long vehicle and semi-trailer inspection, bottom loading and unloading stations.

Depending on the length of the maintenance platform, the entire vehicle unit or its segment can be held in place during inspecting operations. The safety cage is easily manually movable from one hatch to another and its vertical movement are accurately operated with pneumatic controls.

The structure length is tailored individually for each station and operating needs depending on used vehicles, environment, and operation.

The safety structure is manufactured from sturdy structural steel and is designed according to EN ISO 14122-3:2016 standard: Safety of machinery, Permanent means of access to machinery.
